

SECTION 5.0 SUMMARY OF SITES CURRENTLY IN THE CLEANUP PROCESS

When DEQ began drafting the PHSMP, DEQ was providing oversight of response activities at 14 sites within Portland Harbor and had identified 3 additional sites through the site assessment process. Figure 5-1 illustrates the sites' locations within Portland Harbor. A summary of these sites and their current status in the environmental evaluation process is provided in Table 5-1. The majority of these sites (10 of the 17) are completing environmental investigation and cleanup under the oversight of DEQ at the initiative of their site owner/operator through the Voluntary Cleanup Program. Of the remaining seven sites, three have not yet begun remedial investigations and four are subject to consent orders (two of these are Superfund sites). The table provides background on the 17 sites, environmental issues at the sites, and steps taken to ensure that further contamination is prevented. Sites are presented in order of their status in the response process, with sites in the early phase of evaluation described first and sites with implemented remedies described last. Appendix E contains a detailed description of the current status and activity at each site.
