

Certified by ATI: CrossFire™ Logo Program for CrossFire™ Xpress chipsets

The Certified by ATI: CrossFire™ memory logo program is designed to assist consumers in finding and purchasing low latency and high performance memory modules. Memory modules which bear the Certified by ATI: CrossFire logo have been specifically tuned and tested for use with the ATI CrossFire Xpress chipsets for Intel® and AMD® processors.

Modules that pass ATI testing can use the special Certified logo on their retail packaging, web site, advertising or other promotional collaterals to distinguish their memory products from the JEDEC standard DIMMs.

Memory modules submitted for this type of testing must surpass commodity JEDEC memory parameters and comply with minimum latency levels. Generally, this means that the module must have a latency of one (1) lower than JEDEC standard for that particular speed grading.

Please contact memory@ati.com should you have any questions related to memory modules within the Certified by ATI: CrossFire logo program.

The following modules have been tested by ATI and have been confirmed to meet the minimum specifications determined by ATI.
