

Free Change of True Color LOGO All Embraced in LOGOEASY II

In 1997, Legend QDI demonstrated one of its original technologies-LOGOEASY at COMDEX for the first time. This unparalleled technology has brought the best benefit to the system integration manufacturers, for they can mark their own LOGO on the product. It has been four years. Now Legend QDI has done a revolutionary upgrade on LOGOEASY and recommended LOGOEASY II vigorously.

LOGOEASY II can be easily operated in a Windows environment, following in steps with the trend. The new LOGOEASY II is completely compatible with LOGOEASY. It has added the functions of supporting JPEG images and true color display of 64K and 16M colors with regard to JPEG-format graphics files and the high-precision display equipment, which are now widely used. LOGOEASY II supports the high-resolution 640*480 or 800*600 image display and full-screen, top right corner or bottom right corner display. It also supports simultaneous display of logo and sign-on message of the BIOS testing system. LOGOEASY II is a tool that can be operated in multi-platforms to refresh and change LOGO graphics including DOS, WINDOWS 9X, WINDOWS NT, WINDOWS ME and WINDOWS XP. In particular, the tools under the interface of WINDOWS are simple and easy to operate. It teaches you by taking your hand how to change LOGO.

With the development of computer technology, especially the rapid change of image-making technology, we can make high resolution and true-color pictures of various kinds and fully enjoy the colorful world brought about by high technological achievements. LOGOEASY II users also hope to make their log-on LOGO more wonderful or even change it at their free will. It is just to meet this demand that Legend QDI has recently recommended LOGOEASY II to make everything easy.

Through the comparison of the functions of LOGOEASY II with those similar functions of LogoEasy and other mainboards, we can see its prominent functions better.

LogoEasy II v.s. LogoEasy v.s. other mainboard logo
